This week I spent most of my study time on looking over my portal website. I hate to change it considerably from what it was my first quarter at central.

Some of those changes were in the structure of the html or the styling of the css file, which I am somewhat more familiar with, but some of the new portal page also dealt in php script, which I am still trying to learn more about. Even some of the css, however, specifically the css in nav.css was new for me (the @media, and responsive position)

Earlier, I also completed a review of Introduction to the Web on LinkedIn Learning, where topics like basic definitions (HTML, CSS, DNS, etc.), subdomains, servers, and web standards were covered, among other topics.
